EDUCATION

Wilfrid Laurier University, Honours Bachelor's in Computer Science

Relevant Coursework: Data Structures & Algorithms (C and Python), Software Engineering, Databases (SQL), Object-Oriented Programming (Java), Microprocessors (Assembly), Algorithm Design

SKILLS

Languages & Technologies: Java, Python, C/C++, JavaScript, SQL, HTML/CSS, JSON

Frameworks & Libraries: SpringBoot, Flask, Express, React.js, Bootstrap, Tailwind, Shadcn/UI

Tools & Platforms: Azure, AWS, Docker, Git, Github, MongoDB, Vercel, Railway, PostgreSQL, OAuth

EXPERIENCE

RBC - Royal Bank of Canada | *JavaScript* | *Angular.js* | *MongoDB* | *Node.js*

Toronto, Canada

Software Engineer Intern

Jan 2026 - Aug 2026

- Developing an analytics tool measuring team productivity and maturity, driving the project from inception to deployment, estimated to **save \$30MM in development costs** over the next 3 years.
- Spearheading development of **1UP Assist, an intelligent MCP-native chatbot** that orchestrates **custom-built MCP tools** to surface real-time team productivity insights — replacing manual reporting with natural language queries against live Jira, GitHub, and engineering pipeline data.
- Designed and developed a fully customizable analytics dashboard with a dynamic tile system featuring drag-and-drop layout management, building **end-to-end backend data services** and **RESTful APIs in Node.js**, integrated with an **Angular frontend** to surface real-time team productivity metrics.

Dominarlo | *JavaScript* | *React.js* | *MongoDB*

Edmonton, Canada

Software Engineer

Sept 2024 – Apr 2025

- Integrated **Google Cloud Translate API** using **JavaScript, Node.js, Express**, and React to support real-time language switching (En, Ar, Fr), **increasing accessibility for 30%+** of non-English users.
- Designed and developed an interactive quiz game using **React.js**, enhancing user engagement with real-time question-answer interactions.
- Architected **RESTful APIs** for user auth, game state management, leaderboard tracking, **structuring and parsing JSON payloads** ensured scalable performance across **5,000+** users.
- Built a responsive UI with React components and CSS frameworks, ensuring 99% cross-device compatibility across desktops, tablets, and mobile devices.

Dominarlo

Software Engineer Intern

May 2024 – Sept 2024

- Implemented Single Sign-On (SSO) using **OAuth2** in a React based web app to streamline authentication across multiple platforms, improving user access and security.
- Developed dynamic **RESTful APIs** for data retrieval based on user input, supporting **5,000+** concurrent users with optimized backend queries.
- Conducted code reviews and rigorous testing for three new features, contributing to an increase in user engagement.
- Collaborated with front-end and QA teams to identify bugs, streamline development cycles, and ensure delivery of high-impact features.

PROJECTS

[FitQuest](#) | *React.js* | *Gemini API* | *Node.js* | *Express.js* | *MediaPipe* | *MongoDB* | *Railway*

Jun 2025

SpurHacks Hackathon Winner - 2nd Best Overall

- Spearheaded and tested an **AI-powered** RPG-themed fitness app with XP systems, live form feedback, and stat sharing for Gen Z users.
- Developed **MediaPipe**-powered live posture correction for exercises like squats and pushups, increasing user safety and retention during workouts.
- Built **3 AI-powered chatbot** coaches using the **Gemini API** for nutrition, motivation, and training fielding **300+ queries/day** with **90%** topic accuracy via filtered prompts.
- Supported 6+ character types and 12+ skin unlocks, with user activity and stats stored in **MongoDB**; reduced development time **20%** through efficient **Git** branching and collaboration.

[Laurier Exam Scheduler](#) | *SpringBoot* | *React.js* | *PostgreSQL* | *CSS* | *JSON*

Apr 2025 – May 2025

- Built a full-stack exam scheduler web app using **React.js, Spring Boot**, and **PostgreSQL**, for **20,000+** Laurier students to generate visual schedules based on their registered courses.
- Created and deployed a **RESTful API** with **Java Spring Boot** and Docker, integrating with a Railway-hosted **PostgreSQL** database of **450+** exams including course, date, time, and location metadata.
